DNA encoding MTR1 protein, useful e.g. for treating Beckwith-Wiedemann syndrome and tumors, also related proteins and antibodies. Claim 10; Fig 4; 46pp; German.

This invention describes a novel DNA sequence (I) encoding the WTR1 protein that: (i) has at least one biological activity of a TRP (transient receptor potential) family protein; (ii) is connected with etiology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected with tumors involving 11p15.5 abnormalities. The products of the invention have anticancer and developmental activity. MRT1 is involved in regulation of intracellular calcium ion levels, which are essential for cellular responses to hormones and/or growth factors; also in apoptosis

including polycyetic kidney disease.

Including polycyetic kidney disease.

Including polycyetic kidney disease.

RNA, proteins and antibodies (Ab)) are used to treat or prevent diseases

RNA, proteins and antibodies (Ab)) are used to treat or prevent diseases

RNA, proteins and influence of the MRT1 gene or activity of its

protein, or with calcium influe into cells, e.g. BMS, Wilms tumor.

Thabdoid tumors and rhabdomyosarcoma. Probes from (I), or Ab, are also

used for diagnosis of such diseases. (I) can also be used for recombinant

production of MRT1 proteins (II) (used for analysis, characterization and

therapy), as tissue or chromosomal markers, for identifying genetic

diseases and related sequences, as primers for genetic fingerprinting,

source of oligonucleotides for biochips, and to raise anti-protein or

anti-DNA antibodies. (II) are used to raise Ab, as reagents in

competitive assays for (II), as tissue markers; for identifying

interacting proteins and in screening for (ant)agonists. This sequence

represents a human MTRI protein described in the method of the invention
                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                               180

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a mouse and human transient receptor potential channel, TRPB, expressed in taste receptor cells and associated with the perception of bitter and sweet taste. Modulators of TRPB are useful as flavour enhancers in foods, beverages and pharmaceuticals

The invention relates to identifying (M1) a compound that modulates taste signalling in taste cells, by contacting the compound with a eukaryotic host cell or cell membrane which expresses a taste cell-specific ion channel subunit (TC-ICS), and determining a functional effect of the compound upon a transmembrane ion flux of a predetermined ion, compound that modulates taste signalling in taste cells.

(M1) is useful for identifying a compound that modulates taste signalling in taste cells for identifying a compound that modulates taste signalling in taste cells for identifying a compound that binds to a taste cells.

(M2) is useful for identifying a compound that binds to a taste cells of a mammal, in particular a human. Modulators identified by (M1) are used by the food and pharmaceutical industries to customize taste.

CC e.g. as additives to food or medicine so that the food or medicine tastes different to the subject who ingests it. Bitter medicines can be made to taste less bitter and sweet substance can be enhanced. The modulators are useful for pharmacological and genetic modulation of taste signalling pathways. The taste modulators can be enhanced to memalian consubjects for modulation of taste in vivo. The present sequence is that of the predicted human ltrpc6 protein of the invention
                                                                                                               1140
                                                                                                                                                                                              1140
Identifying modulators of taste signaling in taste cells for use in food and pharmaceutical industries to customize and regulate taste, by determining effect of the compound on a taste cell-specific ion channel
                                                                                                                                                             TAHRVDFIAKYLGGLREQEKRIKCLESQINYCSVLVSSVADVLAQGGGPRSSQHCGEGSQ

Identifying a mitochondrial target for drug screening assays and for treating diseases associated with altered mitochondrial function, comprises detecting a modified polypeptide in a sample and correlating with the disease.

This invention relates to novel mitochondrial targets that can be used for therapeutic intervention in treating a disease associated with altered mitochondrial function. Specifically, it refers to a method for identifying proteins of the human heart mitochondrial proteins that are useful for drug screening assays, as well as therapeutic targets. The present invention describes a method for identifying such proteins that can be used in the treatment of various diseases associated with altered mitochondrial function including diabetes mellitus, Huntington's disease, osteoarthritis, Leber's hereditary optic neuropathy (LHON), mitochondrial encephalopathy lactic acidosis and stroke (MELAS), myoclonic epilepsy ragged red fibre syndrome (MERRF) or cancer. Accordingly, these compositions have neuroprotective, nootropic, antichabetic, antichabetic, antichabetic activities. This polypeptide sequence is a human heart mitochondrial protein of the invention.

The present invention relates to a method (M1) for screening for candidate bioactive agents (A1) which are capable of: binding to transient receptor potential melastinin-like (TRRMS) polypeptide (ADR46686); modulating monovalent cationic permeability of channel comprising TRMPS polypeptide, and modulating expression of TRPMS nucleic acid with (A1) and detecting whether (A1) causes expressing TRMPS nucleic acid with (A1) and detecting whether (A1) causes the required effect. TRRMS is a member of the differentiating Calcium-Activated Nonselective (CAN) transmembrane channel polypeptide family and is activated by a rapid increase in intracellular calcium ion (Ca2+) levels. The TRPMS coding sequence (ADR46685) was derived from human kidney cells, however, TRRMS is a variety of tissues indicates a

generalised role of the channel as a tool that couples agonist-induced ritracellular Ca2+ release to electrical activity and subsequent cellular responses. The TRPMS gene was found to be located on chromosome 11p15.5. The candidate bloactive agents identified by (MI), which can open TRPMS muscular systems of cell such as cells of nervous, immune, and conditions associated with diseases, or disorders, such as autoimmune or graft verses host diseases, or disorders, such as autoimmune or candidate bloactive agents identified by (MI), which can close TRPMS channels are useful for treating diseases, conditions associated with diseases.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   718
                                                                                The invention relates to a method for identifying an agent that induces glucose-stimulated insulin production in an animal. The method comprises contacting an agent to a betaTRP polypeptide, and selecting an agent that binds to it or enhances its expression or activity. Further disclosed is a method for expressing betaTRP (beta-transducin protein) in a pancreatic islet cell. The method is useful for identifying an agent that induces glucose-stimulated insulin production in an animal, and thus treating individuals having Type 2 diabetes mellitus or having a predisposition for it. The current sequence represents the human betaTRP amino acid
                                                                                                                                                                                                                                                                                                                                                                                                                                                                240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        298

Ctransient receptor potential) family protein; (ii) is connected with cetology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected with tumors involving libis. Subnormalities. The products of the invention have anticancer and developmental activity. MRTI is involved in cregilation of intracellular calcium ion levels, which are essential for regulation of intracellular calcium ion levels, which are essential for and cell growth, death and differentiation, and in urogenital diseases. C and cell growth, death and differentiation, and in urogenital diseases. C including polycystic kidney disease. (I) and related ribozymes, antisense concluding polycystic kidney disease. (I) and related ribozymes, antisense concluding polycystic kidney disease. (I) and related ribozymes, diseases associated with altered expression of the MRTI gene or activity of its protein, or with calcium influx into cells, e.g. BWS, Wilms tumor, crhabdond tumors and rabadomysarcoma. Probes from (I), or Ab, are also production of MRTI proteins (II) (used for analysis, characterization and thersay), as tissue or chromosomal markers, for identifying genetic diseases and related sequences, as primers for genetic fingerprinting, as conrected of oligonucleotides for biochips, and to raise anti-protein or competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competition and in screening for (ant) agonists.                                             This invention describes a novel DNA sequence (I) encoding the MTR1

Creation that: (i) has at least one biological activity of a TRP

Creation that: (i) has at least one biological activity of a TRP

Creation that seed the many developments of the connected with tumors involving 11pt.5. abnormalities. The products of the invention have anticancer and developmental activity. MRTI is involved in regulation of intracellular calcium ion levels, which are essential for cellular responses to hormones and/or growth factors; also in apoptosis and cell growth, death and differentiation, and in urogenital diseases, including polycystic Kidney disease. (I) and related ribozymes, antisense CR NNA, proteins and antibodies (Ab) are used to treat or prevent diseases CR NNA, proteins and antibodies (Ab) are used to treat or prevent diseases associated with altered expression of the MRTI gene or activity of its protein, or with calcium influx into cells, e.g. BWS, winse tumor, rhabdoid tumors and rhabdomyosarcoma. Probes from (I), or Ab, are also used for diagnosis of such diseases. (I) can also be used for recombinant production of MRTI proteins (II) (used for identifying genetic diseases and related sequences, as primers for genetic fingerprinting, as source of oligonucleotides for biochips, and to raise anti-protein or anti-low anti-low anti-low anti-low anti-low and in screening for (ant) agonists. This sequence connection of the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         4
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             417

food

by n channel pharmaceutical industries to customize and regulate taste, b ermining effect of the compound on a taste cell-specific ion English. Claim 1; Page 211; 306pp; determining subunit,

The invention relates to identifying (MI) a compound that modulates taste signalling in taste cells, by contacting the compound with a eukaryotic signalling in taste cells, by contacting the compound with a eukaryotic channel subunit (TC-EUCS), and determining a functional effect of the compound upon a transmembrane ion flux of a predetermined ion, compound that modulates taste signalling in taste cells.

(MI) is useful for identifying a compound that modulates taste signalling in taste cells for identifying a compound that binds to a taste cells.

(MI) is useful for identifying a compound that binds to a taste cells of a mammal, in particular a human. Modulators identified by (MI) cells of a mammal, in particular a human modulators identified by (MI) cells of a mammal, in particular a human. Modulators identified by (MI) cells of a mammal, in material industries to customize taste.

C are used by the food and pharmaceutical industries to customize tastes different to the subject who ingests it. Bitter medicines can be made to castel for pharmacological and genetic modulation of taste signalling custing pathways. The taste modulators can be directly administered to mammalian cells bredicted mouse ltrpc5 protein of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               716
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                777
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 837
                      The invention relates to a method for identifying an agent that induces glucose-stimulated insulin production in an animal. The method comprises contacting an agent to a betaTRP polypeptide, and selecting an agent that binds to it or enhances its expression or activity. Further disclosed is a method for expressing betaTRP (beta-transducin protein) in a pancreatic islet cell. The method is useful for identifying an agent that induces glucose-stimulated insulin production in an animal, and thus treating individuals having Type 2 diabetes mellitus or having a predisposition for it. The current sequence represents the mouse betaTRP amino acid

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Mouse MTR1 protein #2.
```

callular responses to hormones and/or growth factors, also in apoptosis and cell growth, death and differentiation, and in urogenital diseases. In and cell growth, death and differentiation, and in urogenital diseases. Including polycystic kidney disease. (I) and related ribozymes, antisense associated with altered expression of the MRTI gene or activity of its protein, or with altered expression of the MRTI gene or activity of its protein, or with altered expression of the MRTI gene or activity of its protein, or with altered expression of the MRTI gene or activity of its cased for the diagnosis of such diseases. (I) can also be used for recombinant through, as tissue or chromosomal markers, for identifying genetic diseases and related sequences, as primers for genetic dingerprinting, as source of oligonucleotides for biochips, and to raise anti-protein or competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers; for identifying competitive assays for (II), as tissue markers for second of the invention or represents the murine MTRI gene described in the method of the invention 9 1 MQDVQGPRPGSPGDAEDRRELGLHRGEVNFGGSGKKRGKFVRVPSGVAPSVLFDLLLAEW Gaps 13; DB 4; Length 1158; 67; Mismatches 107; Indels 83.4%; Score 5080.5; 84.0%; Pred.                                                                                                                                     120
                                                                                                                                                                                          180
                                                                                                                                                                                                           237
    The invention relates to a mouse and human transient receptor potential channel, TRPB, expressed in taste receptor cells and associated with the perception of bitter and sweet taste. Modulators of TRPB are useful as flavour enhancers in foods, beverages and pharmaceuticals

The method comprises contacting an agent to a betaTRP polypeptide, and selecting an agent that binds to it or enhances its expression or activity. Further disclosed is a method for expressing betaTRP (beta-transducin protein) in a pancreatic islet cell. The method is useful for identifying an agent that induces glucose-stimulated insulin production in an animal, and thus treating individuals having Type 2 diabetes mellitus or having a predisposition for it. The current sequence represents the rat betaTRP amino acid

The invention relates to identifying (M1) a compound that modulates taste signalling in taste cells, by contacting the compound with a eukaryotic host cell or cell membrane which expresses a taste cell-specific ion channel subunit (TC-ICS), and determining a functional effect of the compound upon a transmembrane ion flux of a predetermined ion, identifying a compound that modulates taste signalling in taste cells, for identifying a compound that modulates taste signalling in taste cells, for identifying a compound that binds to a taste cells in taste cells, for identifying a compound that binds to a taste cell specific ion channel subunit and for modulators identified by (M1) are used by the food and pharmaceutical industries to customize taste, cells of a mammal, in particular a human. Modulators identified by (M1) are used by the food and pharmaceutical industries to customize tastes.

C. G. S. as additives to food or medicine so that the food or medicine tastes cells as additives to food or medicine can be enhanced. The modulators are useful for pharmacological and genetic modulation of taste signalling subjects for modulation of taste in vivo. The present sequence is that of the rat L-TRP protein of the invention

This invention describes a novel DNA sequence (I) encoding the MTR1

protein that: (i) has at least one biological activity of a TRP

(transient receptor potential) family protein; (ii) is connected with

ctiology of BWS (Beckwith-Wiedemann syndrome) and/or (iii) is connected

with tumors involving lipls.5 abnormalities. The products of the

invention have anticancer and developmental activity. MRTI is involved in

cregulation of intracellular calcium ion levels, which are essential for

ccilular responses to hormones and/or growth factors; also in apoptosis

cnicluding polycystic kidney disease. (I) and related ribozymes, antisense

CC and cell growth, death and differentiation, and in urogenital diseases,

cnicluding polycystic kidney disease. (I) and related ribozymes, antisense

CC associated with altered expression of the MRTI gene or activity of its

protein, or with calcium influx into cells, e.g. BWS, Wilms tumor,

cused for diagnosis of such diseases. (I) can also be used for recombinant

cc therapy, as tissue or chromosomal markers, for identifying genetic

cliesases and related sequences, as primers for genetic fingerprinting, as

cuti-lonk antibodies. (II) are used to raise anti-protein or

competitive assays for (II), as tissue markers; for identifying

competitive assays for (II), as tissue markers; for identifying

competitive assays for (II), as tissue markers; for identifying

competitive assays for (II), as tissue markers; for identifying

competitive annum mTRI protein described in the method of the invention

gequence 15, Application US/09112096

patent No. 6194152

GENERAL INFORMATION:

APPLICANT: Reiner Laus

APPLICANT: Michael H. Shapero

APPLICANT: Larisa Tsavaler

TITLE OF INVENTION: Proster Tumor Polynucleotide and
TITLE OF INVENTION: Prosters: 000000112,096

TITLE OF INVENTION: Antigen Compositions

FILE REFERENCE: 7636-0015.30

CURRENT FILING DATE: 1998-07-09

EARLIER APPLICATION NUMBER: 60/056,110

EARLIER FILING DATE: 1997-08-20

NUMBER OF SEQ ID NOS: 29

SOFTWARRE: FASLEGO for Windows Version 3.0

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Sequence 7, P
